

Assignment

You are reviewing conversions today. On the wikipage, there are two pages for you to refer to. The first is under Downloads labeled Unit Conversion Factors. The second is a worksheet that you did previously to use for an example under Assignments labeled Unit Conversion Worksheet.

You need loose paper.

1st Student

Write your name on the paper and beside it write Creator.

Each student creates 10 conversion questions with 4 lines under each problem for workspace.

Ex. 1. 2 miles = _____ft

2nd Student

Write your name on the paper and beside it write Solver.

After you have created these 10 problems, pass it to another student to solve the problems **showing their work**.

3rd Student

Write your name on the paper and beside it write Check.

After completing the problems you are to pass it to another student to check over these problems making any corrections (if you have a different colored pen use it).
